

New ceiling fan connection

What you can do with a little PVC pipe and a lot of couplings

supply and return air
efficiency

Roof flashing not needed

Save money, just use nail gun nails, they will hold is up till your out of town.

improvise, adapt and overcome! They just said plug it.

when you use insulation
as piping, remember to
use more duct tape

it works and it's less cost !

When it rots just turn it over!

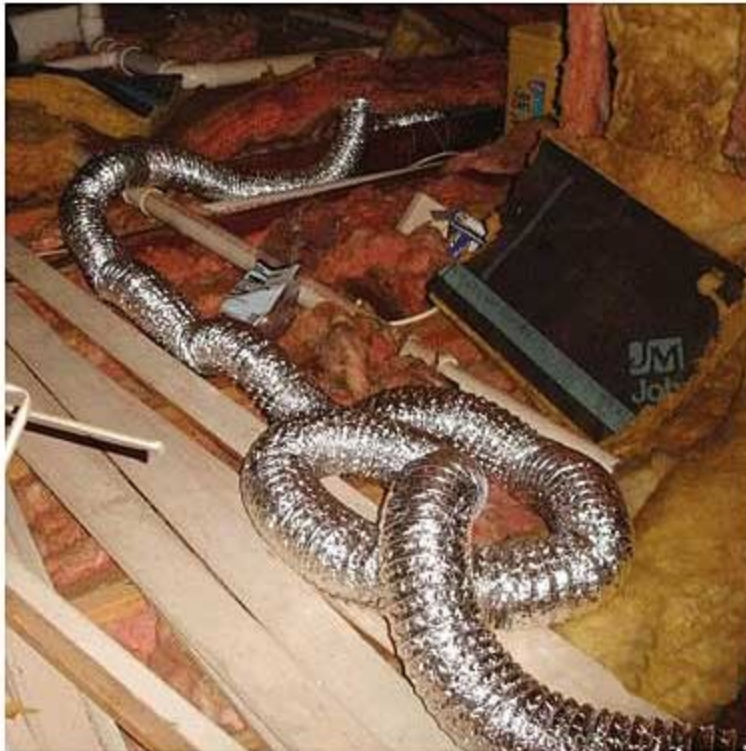

Undersized exhaust louver? just use the plumbing vent for additional exhaust air!

If you can do it with one why not more!

A less expensive but functional whole house ventilator

your guess is as good as mine

No need to ground this box. The cigar box is located under a kitchen cooktop. Fendrich was a local cigar company here in Evansville, Ind. I would call this a classic case of Indiana frugality.

The latest in lighted ventilators

Back-up system for the no flashing design for roof penetrations

The Frankenstein design for gas water heaters

Didn't need that beam anyway!

Take advantage of unused storage space

The latest in designer outside air plenums

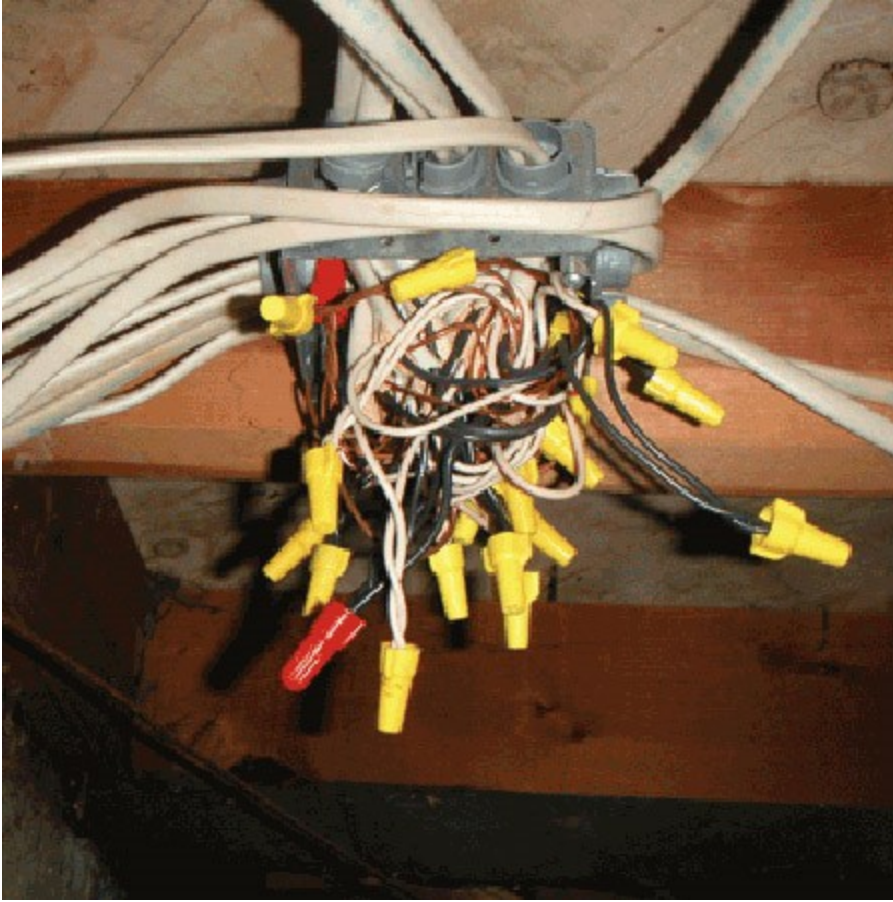

efficient electrical design (who needs codes?)

Save another hole in the wall,
Yes- go ahead and connect the dryer vent to the WH flue.

Dip can j- box, from good ole boy engineering and power wiring installers Inc.

Latest design from; I'm not an electrical engineer but it looks good to me!

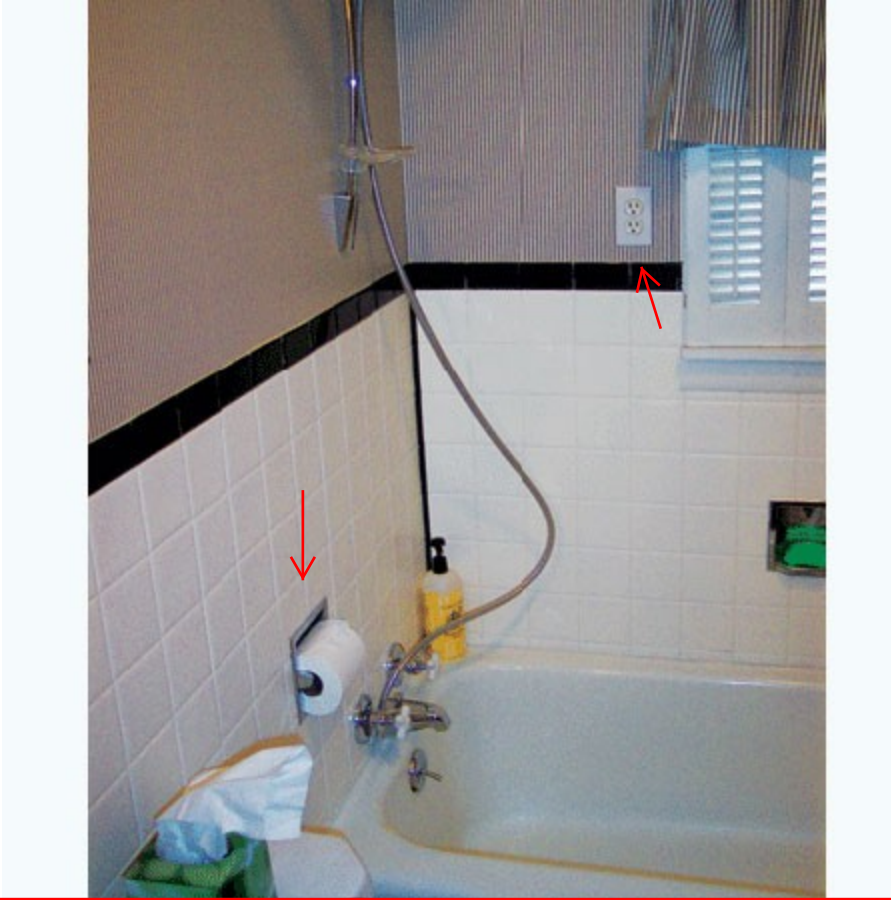

When the power company told its crew to run electricity to this house, I'm sure they didn't mean to just stick all the wires through a hole in the roof! The definition of "value engineering"!

WTF is this?

When you run out of pipe, use what you have in the truck.

Duplex outlet in shower, allows your wife to use her electric shaver in the shower; the TP is incase she cuts herself!!
